

THE *Luxury Tile Collection*

2024/25

THE Luxury Tile Collection

2024/2025

Welcome to our new Luxury Tile brochure for 2024/2025. We've selected the finest ceramic and porcelain tiles and presented them here for you to enjoy and plan your next project with.

This new brochure has been designed so that the reader can search for desired products by style, size or material type, as well as alphabetical by range name. In addition, there is a slip resistance chart near the back and an overview of our Luxury White tiles.

There are many new ranges in this edition, including floral concepts such as ALURE & VILLORE, on-trend authentic travertine styles with LACIO & VENICE; classic marble designs like PIETRA Di MARMI & MARQUINA GOLD, as well as creative small brick and wood formats such as COLORS, HARLEM and CORTINA.

ENDLESS TIME and new formats in the eye-catching SAN FRANCISCO collection bring plenty of style to the Industrial look category, and the addition of ranges like BURLINGTON give you more choices in our INDOOR / OUTDOOR concepts. If it's colourful patterns you're looking for, then RIVOLI should be just what you need.

And if that is not enough, we also have a new separate brochure HOMESTYLE ESSENTIALS, devised to offer you fabulous tile options with a more modest budget in mind. You can also see our standalone EXTERNAL PORCELAIN PAVERS brochure, showcasing the latest designs and colours for your outdoor living needs.

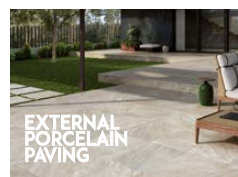

Villeroy & Boch is a global brand synonymous with style, design and quality, producing fine ceramic and porcelain products since 1748. We are pleased to offer a special collection of new ranges **RUSTIC BLEND**, **TRI-ART** and **TUSCAN TRACES**, as well as the already popular **MARBLE ARCH**. All these collections are stocked, but the whole Villeroy & Boch portfolio is available on a special-order basis.

If you are a Virtual Worlds user you will find all of our product updates included in the software package.
Please ask for further details.

Authority Beige

The 'R' rating or resistance level is a measure used by professionals to determine the anti slip properties of a floor tile, with R9 being the lowest rating and R12 being the highest rating.

Please Note: ● R11 finish available in coordinating Outdoor Paver. Please see our Outdoor Porcelain Pavers brochure for details.

GENERAL INFORMATION

TILE SHADING & DIGITAL VARIATION

Modern tile production utilises high definition digital printing often replicating widely varying colours, effects and textures typically found, for example, in stones and wood. This variation cannot be fully represented in a single sample tile. Therefore please ensure the consumer is fully aware of the possible variation by viewing multiple pieces and/or a representative image prior to fixing.

The variation of colour, texture, and tone between individual ceramic and porcelain tiles is termed as colour shade variation. Variation in colour and shade is an inherent characteristic of any fired product and can actually enhance the character and beauty of the finished project.

Porcelain tiles are durable and stain resistant, but in the case of polished porcelain the credit belongs more to the tile sealer than to the tile itself. In the process of polishing porcelain, the manufacturer buffs off the top particles of the tile, giving the clay a porous surface. To protect your floor from stains and scratches, immediately seal it after installing it using a penetrating sealer. This type of sealer doesn't just sit on top of the tile, it seeps into the surface, reinforcing it from within.

We recommend a product from All For Stone called Seal Gold.

Photographic images of tiles may not always show the true colour, finish or texture of the tile itself.

Examples of extreme shading variations

FIXING ADVICE FOR OBLONG TILES ON WALLS & FLOORS

Despite the popularity of brick bond fixing in the UK, European and US tile markets, it is becoming apparent that this method of tiling is unsuitable for today's modern large format tiles. As tiles become larger it is impossible to guarantee that they will always be totally flat.

All tiles regardless of their origin are susceptible to warpage during the manufacturing process, and as a result there are tolerances in place to allow for this inherent curvature. The longer the tile the greater level of allowed curvature as the measurement is calculated in mm as a percentage of the tile's length.

Taking this information into consideration it is the view of our suppliers that we cannot endorse any installations where a brick bond fixing method has been used. We are happy to endorse stacked bond, or staggered bond where tiles are offset by no more than 30%. Where either a wall or floor tile is fixed using staggered bond, a suitable size grout joint must be used which does not exaggerate any of the inherent curvature that may be present in the product.

WHAT ARE 'PEI' RATINGS ?

PEI stands for the Porcelain and Enamel Institute.

PEI rates a glazed tile's ability to resist abrasion and its suitability as a floor tile.

This is referred to as **Wear Rating** in this brochure, where applicable.

The wear rating scale ranges from PEI 2 to PEI 5. Lower ratings (typically 2 & 3) are only suitable for light tread areas, whereas higher ratings (typically 4 & 5) are suitable for most domestic use and some commercial areas.

WHAT IS RECTIFIED?

A "Rectified" tile is a ceramic or porcelain tile that has been mechanically cut or ground down to an exact size. since it applies only to the tile's edges, it is called an edge treatment. Additionally, the edges are usually precisely cut at a square: a 90-degree angle. Rectification is not considered better than other edge treatments; it is just a different treatment that allows for a different look.
